

Press Release

April 2010

European Rocketry Portal Relaunched

After almost 15 years online, European Model Rocketry (EMR), Europe´s oldest and leading rocketry portal, was re-build from the ground.

All existing pages were transferred to a new content management framework, which will help to meet the future demands and to provide excellent services to the European and worldwide rocketry community.

The new system will enable a large variety of possible future services. A new meeting point has been added as well as a small ads marketplace for example. Visitors can register to use interactive services such as the new RocketryWiki or the new European rocketry forum.

Thanks to native multi-language support, pages may be translated to several national languages. Currently, all pages are available in English and some in German.

Co-Editors will be able to use the new platform to add and edit content very easily without handling with formatting or programming code.

European Model Rocketry offers a large link database, a rocketeers community including a directory, a library, online auctions and information on software, books or many issues such as local regulations.

For more information, please visit the EMR website at:

www.europerocketry.com

European Model Rocketry (EMR) is Europe´s leading rocketry portal since 1996. The site offers information about model rockets, highpower, amateur- and experimental rocketry, water rockets, sport rocketry and other space activities. EMR is an non-profit project not affiliated with manufacturers, organisations or vendors to promote rocketry in Europe.
